Laboratorio Farmacologico

To:

**macure**  
PHARMA

Object: Isoprenalin 0.2 mg/ml SALF

The undersigned Gagliano Carmelo QA Manager SALF declares that the Isoprenalin SALF 0.2mg/ml passed the stability study at 25°C for 6 months (stress test) and 15°C for 24 months (normal condition).

I evaluated the stability data at 15°C and 25°C and I can declaration the products is sensitive at longer exposure to heat.

Given the above considerations limited exposure of the product to temperatures higher than 15 °C do not impact on quality of product.

I remain at your complete disposal for any clarification.

Attached the stress stability test.

Sincerely

Dr. Carmelo Gagliano

Quality Manager
